                                 Configure Time Stamp Servers

                                 Configure a default *Time Stamp Server* if you want to embed a trusted time stamp when
                                 signing. If you are in a workgroup, your computer administrator may provide you with Time
                                 Stamp Server configuration information.

                                 Select one of the entries above and click *Edit* to view or change settings, or click *New* to add
                                 and configure a Time Stamp Server. Select a default server using *Set Default*. If you have
                                 selected a default server then a time stamp will be embedded with every signature that you
                                 create.

                                 Click *Export* to share your Time Stamp Server settings with others.
